

Paper 0.50 - Claim Validation Contract

CQE-paper-00.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Paper 0.50 - Claim Validation Contract

Purpose

Paper 0.50 defines when a statement is allowed to become a claim in the CQECMPLX papers. Anything else may still be useful, but it must be carried as a candidate, boundary failure, analogy, motivation, or open obligation.

Claim Contract

A statement becomes a claim only when it has:

1. a named object,
2. a stated context,
3. a predicted result,
4. a test protocol,
5. a receipt format,
6. a falsifier,
7. a scope boundary,
8. a source binding.

The contract is intentionally strict because the papers make unusual claims. Strictness is not meant to restrict the reader. It makes the error state visible.

Boundary Failure

A failed or incomplete test is not discarded. It is classified as:

boundary
obligation
candidate
misfit
recenter-required
insufficient-source

This lets the failure remain useful. It may show that the claim was too broad, that the center moved, that the tool binding was incomplete, or that a later paper must carry the result instead.

Merkle-Style Paper Link

Between neighboring papers, this contract acts like a linked review layer. A paper must carry forward only what it can identify:

previous receipt hash or source binding
current claim identity
current verifier or proof route
current obligation set
next paper dependency

The word "Merkle" here means linked accountability: a later paper should not silently depend on an earlier result without naming the earlier result and its receipt.

Reader-Facing Review

The `0.50` papers are allowed to speak directly to the reader because their job is meta-review.

They explain how the surrounding papers connect and how the reader can test the connection.
The integer papers should not rely on that voice. They should present the claim formally.

Conclusion

Paper 0.50 is the admission contract for claims. It allows strong claims, but only when their proof burden is visible.
