

Paper 15.75 - Mass-Residue Carrier as Next-State Precondition

CQE-paper-15.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 15.75 - Mass-Residue Carrier as Next-State Precondition

Purpose

This bridge defines what Paper 16 and later papers may inherit from Paper 15.

Exported State

Paper 15 exports:

```
Rule 30 split
F2 obstruction
Arf gluing status
VOA weight
correction-residue status
open physical-mass boundary
```

Legal Use in Paper 16

Paper 16 may use Paper 15 as:

```
residue-weight input
continuum-edge carrier
boundary scaling datum
open McKay-Thompson obligation
```

Paper 16 may not use Paper 15 as:

```
proved Higgs mechanism
proved mass spectrum
proved electroweak model
```

Recenter Rule

The transition is:

```
Paper 15 residue carrier -> Paper 16 edge window -> Paper 16 continuum residue
```

The next paper must create its own receipt at the edge window.

Hidden-Guess Diagnostic

Before using the exported state, classify:

```
residue closed, weight closed, parity open, physics open
```

Then reveal the receipt and carry the classification forward.

Conclusion

Paper 15.75 lets later papers inherit a real residue carrier without inheriting a physical mass claim that has not yet been proven.
