

Paper 19.25 - Observer Face-Selection Toolkit

CQE-paper-19.25

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

- top-level review source: Papers\Source\CQE-paper-19.25.md

Paper 19.25 - Observer Face-Selection Toolkit

Purpose

This supplement exposes the finite face-selection checks for Paper 19.

Digital Route

Run:

```
python production/formal-papers/CQE-paper-19/verify_observer_face_selection.py
```

The receipt must show four selectable faces, three latent faces after any single selection, gluon invariance under antipode, and the static `Z4` split.

Analog Route

Draw four frame cards:

```
C-centroid  
R-centroid  
C-flipped  
L-centroid
```

Turn one card face-up. Pin the other three as latent obligations. Mark `C` as the invariant recovery coordinate for antipodal reconstruction.

Hidden-Guess Diagnostic

Before revealing the receipt, classify a candidate as:

```
closed face selection  
closed invariant  
bounded open-gap route  
open observer promotion  
invalid deletion
```

Reveal the receipt only after classification.

Boundary

The toolkit may demonstrate finite face selection. It may not claim consciousness, collapse, observed SPINOR, or a global observer theorem.

Conclusion

Paper 19.25 makes observer face-selection inspectable without overpromoting the interpretation.
