

Paper 22.50 - MetaForge Claim Contract

CQE-paper-22.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 22.50 - MetaForge Claim Contract

Admission Rule

A Paper 22 claim is admitted only when it is framed as a materials candidate unless simulation, fabrication, and measurement receipts are attached. A candidate must include material-source rows, partner-selection scores, fold output, seam/obligation rows, production accounting, and a falsifier.

Required Fields

Each candidate row must provide:

- base material,
- partner material,
- source database or custom-file receipt,
- Pareto score and component scores,
- fold count,
- final candidate estimates,
- error-wall summary,
- seam proposals or explicit no-seam reason,
- production-energy estimate,
- cost/time estimate,
- open obligations,
- falsification condition.

Rejected Promotions

The following promotions are not allowed:

- candidate estimate to measured material property,
- positive production estimate to manufacturability proof,
- seam proposal to validated interface design,
- fold output to finite-element result,
- predicted auxetic sign to measured Poisson ratio,
- package visualization to experimental evidence,
- material database row to certified supplier data.

Falsifiers

A candidate row is falsified if the partner score cannot be reproduced, if the fold count or final estimates change without a changed receipt, if a seam row is missing for a declared boundary issue, if production energy or cost is absent, or if a fabricated sample contradicts the predicted behavior.

Carry Rule

Later papers may import Paper 22 as an applied-materials candidate generator. They inherit its open obligations unless they provide stronger domain receipts.
