

Paper 22.75 - MetaForge Next-State Bridge

CQE-paper-22.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

- top-level review source: Papers\Source\CQE-paper-22.75.md

Paper 22.75 - MetaForge Next-State Bridge

Bridge Role

Paper 22 exports a candidate-ledger pattern to the next applied papers. The pattern is: choose a domain inventory, score admissible partners or transforms, run the finite candidate transport, preserve failures as obligations, and emit a reviewable production or test ledger.

Exported Artifacts

The next state receives:

- finite inventory discipline,
- partner/transform scoring,
- ten-step candidate transport,
- error-wall-to-obligation carry,
- seam or mitigation proposal rows,
- production/test estimate ledger,
- invalid-promotion labels.

Use in Paper 23

Paper 23 may use the fold and seam pattern for proteins. A protein fold claim must keep sequence, structure, energy, and assay evidence separate. Paper 22 does not prove protein folding; it exports the candidate-ledger form.

Use in Paper 25

Paper 25 may use the production-energy ledger as an energetic traversal map. It must preserve the difference between estimated route cost and measured route cost.

Boundary

The next paper may say that an object has been converted into a candidate with a receipt. It may not say the object has been experimentally solved unless the domain-specific verifier closes that claim.
