

Paper 26.25 - Z-Pinch and Shear Toolkit Supplement

CQE-paper-26.25

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 26.25 - Z-Pinch and Shear Toolkit Supplement

Purpose

This supplement shows how to reproduce Paper 26's carrier and shear receipt. The proof is in Paper 26 and its formal verifier; the physical Z-pinch reading is not discharged here.

Digital Route

Run:

```
`python production/formal-papers/CQE-paper-26/verify_zpinch_shear_horizon.py`
```

The expected status is ``pass_with_open_obligations``. The verifier checks the integer Oloid period, octonion period, octonion non-associativity, the 16-bit Rule 30 carrier shear probe, and the transport-ledger pinch classification.

Analog Route

Draw a four-position rolling strip. Advance one quarter turn per tape bit and record sheet, phase, and parity. Beside it, draw two orient threads, one for the ``e4`` carrier and one for the ``e5`` carrier. Mark a shear knot where the orient bits differ.

The analog row passes when it reproduces the same carrier landing and the same shear-knot positions. It does not become a plasma experiment.

Hidden-Guess Diagnostic

Training mode should hide the label until after the reviewer chooses one:

- integer carrier closure,
- octonion period closure,
- carrier residue,
- shear analog,
- ledger pinch reclassification,
- invalid physical Z-pinch promotion,
- invalid friction/generation promotion.

The answer key separates carrier proof from candidate physical reading.
