

Paper 28.50 - N-Dimensional Game Lattice Claim Contract

CQE-paper-28.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Paper 28.50 - N-Dimensional Game Lattice Claim Contract

Purpose

This contract defines the minimum fields required before a game-lattice claim can be promoted.

Required Fields

Each game row must provide game id, dimension, dimension-admissible Boolean, source state, S3 permutation, target state, emitted bit, anneal steps, anneal final state, carrier status, and closure status.

Each board claim must provide the dimension verifier used. For dimension 8, the receipt must include extended Hamming codeword count, minimum weight, and weight distribution.

Promotion Rules

The following may be promoted:

- forced code-tower dimension membership,
- dimension-8 extended Hamming board,
- finite S3 trace-2 move orbit,
- Rule 30 local emission,
- forbidden carrier logging,
- ≤ 3 -step centroid closure.

The following promotions are rejected:

- finite move orbit to complete game solver,
- admissible dimension to arbitrary dimension,
- legal move receipt to strategy proof,
- robot example to all board games,
- trace-2 orbit to every real piece type without a piece map.

Linked Review

Paper 28 inherits Paper 24's board-automata discipline and Paper 27's observer/turn-delay guard. It may export local-rule game receipts only when open game-theory obligations remain visible.
