

Paper 32.50 - Supervisor Cursor Claim Contract

CQE-paper-32.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 32.50 - Supervisor Cursor Claim Contract

Purpose

This contract defines when a supervisor-cursor statement is valid. It prevents the schedule from becoming an untracked substitute for the proof receipts it routes.

Required Fields

Every cursor row must include:

- dimension `n`,
- schedule length,
- coverage status,
- minimality status,
- lower bound,
- upper row,
- corridor width,
- receipt path,
- routed paper or tool status.

Coverage and minimality are separate fields. A covered schedule is not automatically minimal.

Accepted Claims

The contract accepts validated coverage for `n=4..8`.

The contract accepts closed minimality for `n=4` and `n=5`.

The contract accepts `n=8` length `46205` as the Egan upper row.

The contract accepts the Paper 32 to Paper 01 suite wrap as an active-suite retest route.

Rejected Promotions

The contract rejects these promotions unless a future verifier supplies the missing evidence:

- minimality for `n>=6`,
- cursor content replacing paper content,
- a selector hiding open obligations,
- a final-observation theorem without its own proof row,
- a schedule row counted as proof for a routed paper.

Hidden-Guess Ablation

Diagnostics must classify rows before revealing the answer. Valid labels are coverage row, minimality row, bounds row, open corridor, selector row, and invalid proof substitution.
