

Paper 32.75 - Supervisor Cursor Next-State Preconditions

CQE-paper-32.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Paper 32.75 - Supervisor Cursor Next-State Preconditions

Purpose

This supplement defines how Paper 32 exports into deployment. The kernel may use the supervisor cursor to schedule requests, but every scheduled request must carry its own proof/open/readout status.

Forward Exports

Paper 32 exports:

- coverage receipts for `n=4..8`,
- minimality scope: closed only for `n=4` and `n=5`,
- n=8 bounds row: lower `46085`, upper `46205`, corridor `120`,
- supervisor cursor as request schedule,
- paper-kernel selector wrap from Paper 32 to Paper 01,
- obligation that selectors preserve status.

Deployment Rule

A UI, API, NotebookLM pack, sidecar kernel, or paper-kernel runner may call the cursor to choose an order. It must then show the selected item with its own receipt status. Cursor success is not item proof.

Kernel Sidecar Rule

Training mode keeps hidden-guess classification on for schedule rows and selector rows. Non-training mode may make it optional, but exported receipts must still reveal the final answer key after classification.

Failure Condition

Deployment fails if the cursor routes a paper, package, or product while dropping whether that item is proven, open, readout-only, or rejected.
