

Paper 27.50 - Observer Delay Claim Contract

CQE-paper-27.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 27.50 - Observer Delay Claim Contract

Purpose

This contract defines the minimum fields required before an observer-delay claim can be promoted.

Required Fields

Each observer row must provide depth, state `(L, C, R)`, reflected state `(R, C, L)`, observer A center, observer B center, shared-center Boolean, side-disagreement Boolean, anneal-delay steps, anneal final state, four-frame label, static Z4 period, and emitted center bit.

Each temporal-period claim must provide the tested depth, candidate period, label-trace result, center-column result, and first counterexample if the claim fails.

Promotion Rules

The following may be promoted:

- static Z4 template over eight chart states,
- shared `C` under LR reflection,
- bounded anneal delay in finite chart steps,
- temporal-period refutation over the tested trace,
- preservation of side disagreement as residue.

The following promotions are rejected:

- static Z4 label period to temporal Rule 30 period,
- anneal delay to human response time,
- shared `C` to physical simultaneity,
- frame selection to consciousness,
- frame selection to measurement collapse.

Linked Review

Paper 27 inherits Paper 19's observer-face discipline and Paper 26's horizon quarantine. It may export observer vocabulary only when the finite receipt and interpretive boundary are kept together.
