

Paper 30.75 - Grand Ribbon Next-State Preconditions

CQE-paper-30.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 30.75 - Grand Ribbon Next-State Preconditions

Purpose

This supplement defines what Paper 30 exports to Papers 31 and 32. It gives the next papers a corpus-level map without letting the map become a hidden premise for the papers already swept into it.

Forward Exports

Paper 30 exports:

- the eight-slot schema `C, L, R, B, T, O, W, A`,
- the 30-position sweep `CQE-paper-00` through `CQE-paper-29`,
- the rule that a slot is filled only with value plus provenance,
- the terminal-route receipt,
- the transport-ledger boundary state,
- the rule that Paper 31 is readout, not dependency.

Application To Paper 31

Paper 31 may say that the corpus was enacted as an LCR process. It should use the Paper 30 receipt as the object being read, not as a way to prove earlier claims retroactively.

Application To Paper 32

Paper 32 may package the suite as a selector over the ribbon. The selector must preserve slot status, paper order, receipt path, and open obligations. A deployment UI can make the ribbon navigable, but it cannot hide open lifts.

Kernel Sidecar Rule

Training mode keeps the hidden-guess classification layer on for every ribbon diagnostic. Non-training mode may expose it as an option. Either mode must export the final answer key after classification so the kernel can learn which rows are closed, open, readout-only, or invalid dependency.
