

Paper 15.50 - Mass-Residue Carrier Claim Contract

CQE-paper-15.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 15.50 - Mass-Residue Carrier Claim Contract

Purpose

This contract governs Paper 15 claims. It separates finite substrate residue from physical mass claims.

Admitted Claims

Admit a claim when it provides:

```
local LCR state
Rule 30 split receipt
Arf invariant or gluing result
VOA weight
correction-residue status
open physical boundary, if any
```

Rejected Promotions

Reject by default:

```
VOA weight -> physical mass
correction residue -> Higgs field
Arf invariant -> quantum field theory proof
local/oracle nth-bit pass -> closed McKay-Thompson parity
```

These may be reopened only as separate calibrated claims.

Hidden-Guess Rule

Every diagnostic must hide the answer until after classification:

```
closed substrate residue
open physical obligation
invalid overclaim
bounded/local evidence
```

Linked Receipt

Current receipt:

```
production/formal-papers/CQE-paper-15/mass_residue_carrier_receipt.json
```

Current verdict:

```
mass-residue carrier: pass
physical Higgs/mass derivation: open
```

Boundary Failure

The contract fails if a later paper says Paper 15 proves particle mass.

The contract passes if a later paper says Paper 15 supplies a weighted residue-carrier proxy that must be calibrated before physical mass language is admitted.

Conclusion

Paper 15.50 keeps the strongest useful object visible: a finite residue carrier with a real receipt. The physical interpretation is the next problem, not an automatic consequence.
