

Paper 18.75 - VOA / Moonshine Route Next-State Bridge

CQE-paper-18.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 18.75 - VOA / Moonshine Route Next-State Bridge

Purpose

This bridge exports Paper 18 to Paper 19 and later papers as a preconditioned route object.

Exported State

Paper 18 exports:

```
finite seed  $Z(q) = 2q^0 + 6q^5$ 
static Z4 route template: 2 fixed, 6 period-4, no period-2
Monster scalar 196883 = 47 * 59 * 71
bounded McKay matrix bootstrap
registered correction classes (2,0)->2A and (3,1)->3A
bounded Monster-D4 lift evidence with open gaps
open correction_via_voa
open full Moonshine transport theorem
```

Legal Use In Paper 19

Paper 19 may use Paper 18 to select or compare observer faces when the route is stated in bounded form:

```
finite seed + bounded route receipt + open global residue
```

Illegal Use

Do not write:

```
Paper 18 proves Monstrous Moonshine for the chart.
Paper 18 proves the  $O(\log N)$  Rule 30 extractor.
Paper 18 completes correction_via_voa.
Paper 18 turns bounded tables into full McKay arithmetic.
```

Recenter Rule

When using the route, set:

```
C = selected representation route
B = finite/bounded/global boundary
T = route transform being applied
O = missing evaluator, table extension, or transport theorem
```

Then repeat the diagnostic at the next boundary.

Hidden-Guess Diagnostic

Before showing the route result, ask whether the candidate is:

```
finite closed
bounded closed
bounded with open gaps
open global
invalid promotion
```

Reveal the receipt after the answer and log the mismatch.

Conclusion

Paper 18.75 lets later papers use the VOA/Moonshine route as a real instrument without losing the global obligations it still carries.
