

Paper 23.75 - FoldForge Next-State Bridge

CQE-paper-23.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 23.75 - FoldForge Next-State Bridge

Bridge Role

Paper 23 exports a chain-descriptor pattern. It starts with a local sequence, builds contact or adjacency receipts, marks candidate transitions, and keeps global interpretation open until a domain verifier closes it.

Exported Artifacts

The next state receives:

- local chain-window discipline,
- contact-map receipt discipline,
- candidate transition marks,
- bounded topology/winding witness status,
- explicit validation obligations,
- invalid-promotion labels.

Use in Paper 24

Paper 24 may translate the chain and contact-map idea into paths on a board or automaton lattice. A chess or game-state path may be read as a local sequence with adjacency receipts, but it must prove its own rules and reachability.

Use in Later Applied Papers

Later biological, material, CAD, or game papers may use the FoldForge pattern when an object behaves like a constrained chain. The claim remains a descriptor until its own verifier supplies measurement, simulation, or formal reachability.

Boundary

Paper 23 exports the receipt form. It does not export biological closure.
