

Paper 24.50 - KnightForge Claim Contract

CQE-paper-24.50

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 24.50 - KnightForge Claim Contract

Admission Rule

A Paper 24 claim is admitted only when it is framed as a finite local-rule automaton or a frame operator unless a stronger game-theoretic proof is attached. The receipt must preserve occupied rows, rejected rows, local states, anneal trajectories, sector labels, and open obligations.

Required Fields

Each admitted board row must provide:

- board size or lattice domain,
- sweep order,
- cell identifier,
- `L`, `C`, and `R` bits,
- occupancy or rejection decision,
- attack/exclusion evidence,
- side label,
- L-conjugate attractor,
- anneal step count,
- frame label or reason absent,
- closure status.

Rejected Promotions

The following promotions are not allowed:

- finite greedy placement to solved chess,
- frame operator to playable N-dimensional game,
- board sequence to OEIS identity without search evidence,
- chart sector split to complete placement-class theorem,
- analog token-board closure to game-theoretic proof.

Falsifiers

The claim fails if an occupied pair attacks, if a row cannot replay its local state, if any row fails L-conjugate closure within three steps, if the $2 + 6$ sector verifier fails, or if a claimed sequence identity is not reproduced by the finite sweep.

Carry Rule

Later game-lattice papers may import the local-rule receipt and frame operator. They inherit the open playability and sequence-identity obligations until their own receipts close them.
