

Paper 10.75 - T10 Master Receipt as Next-State Precondition

CQE-paper-10.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Evidence Inputs

Paper 10.75 - T10 Master Receipt as Next-State Precondition

Purpose

Paper 10.75 explains how the T10 master receipt becomes a precondition for Paper 11 and the rest of the second block.

Exported State

Paper 10 exports:

```
C00 observer center
00 -> 1 encoding event
Papers 01-09 receipt bindings
transport rows and classifications
local witness replay status
lookup cache status
open-lift set
master verdict pass_with_open_lifts
```

Use in Paper 11

Paper 11 may use T10 as the admission gate for theory claims. A theory can enter the suite only if it names what it imports from T10 and whether that import is demonstrated, bounded, registered, or open.

The allowed transition is:

```
T10 master receipt -> theory admission gate
```

The disallowed transition is:

```
T10 exists -> all later theory claims are accepted
```

Use in Later Papers

Later papers may use T10 for:

- stack-level receipt binding,
- transport-row citation,
- lookup-cache provenance,
- open-lift inheritance,
- observer-center continuity,
- proof-boundary enforcement.

Every use must preserve the distinction between demonstrated rows and open or registered lifts.

Precondition Rule

Before a later paper cites T10, it should be able to answer:

```
Which T10 component is imported?
Is it demonstrated, bounded, registered, or open?
Which receipt proves it?
Does the later paper close any open lift?
Is the observer-center lineage preserved?
```

Conclusion

Paper 10.75 turns the master receipt into portable audit state. It lets Paper 11 and later papers cite the first substack while keeping open lifts visible and tied to future proof obligations.
