

# Paper 29.75 - Monster Horizon Next-State Preconditions

CQE-paper-29.75

CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-13

## Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

## Evidence Inputs

- top-level review source: Papers\Source\CQE-paper-29.75.md

## Paper 29.75 - Monster Horizon Next-State Preconditions

### Purpose

This supplement defines what Paper 29 exports forward. The next papers may use Monster and energy-bound language only by inheriting the quarantine contract: closed finite rows remain closed, and horizon readings stay tagged until a witness function exists.

### Forward Exports

Paper 29 exports four closed finite rows:

- $47 \cdot 59 \cdot 71 = 196883$ ,
- $196884 = 1 + 196883$ ,
- $Z(q) = 2q^0 + 6q^5$ ,
- centroid chain: two fixed points and six period-4 states.

It also exports three open hypothesis rows:

- H1: `voa_weight` as physical energy,
- H2: Monster dimension as a universal ceiling,
- H3: Pariah/Happy-Family closure as a physical boundary law.

### Application To Paper 30

Paper 30 may sweep the corpus as a ribbon only if Paper 29's horizon rows stay visibly marked. The ribbon may say the Monster arithmetic is closed. It may not say the Monster is a physical energy bound.

### Application To Paper 31

Paper 31 may treat the quarantine itself as an observer act: the center `C` chooses a row, reads the boundary, records the residue, and refuses to erase the failed promotion. The failed promotion is useful data.

### Application To Paper 32

Paper 32 may package the suite only if product adapters preserve the same status fields. A UI, API, NotebookLM pack, or sidecar kernel may show energy-bound hypotheses, but it must display or export their open status after the hidden-guess decision is made.

### Kernel Sidecar Rule

Training mode keeps the guess layer on by default. Non-training mode may expose it as an option. In both modes, any diagnostic touching Paper 29 must record the distinction between closed arithmetic, closed finite partition, valid analog, and unwitnessed physical claim.
