CQECMPLX Formal Paper Series

Review-facing PDF built 2026-06-12

Construction Basis

This PDF is the clean paper artifact. Source extracts, kernels, receipts, tool notes, workbook material, and package bindings are used as construction evidence; they are not treated as separate review-facing papers.

Paper 9.75 - Hamiltonian Window Emergence as Next-State Precondition

Purpose

Paper 9.75 explains how Hamiltonian window emergence becomes a precondition for Paper 10 and the rest of the second block.

Exported State

Paper 9 exports:

```
ordered center states
width-3, width-5, width-7 window reads
order counts 4, 3, 2
source indices
source centers
forward receipts
backward receipts
composite centers
scope boundary for physical time claims
```

Use in Paper 10

Paper 10 may use Paper 9 composite centers as receipt-bearing inputs only if it preserves their provenance. A composite center is not just a label; it is a windowed object with source indices and source centers.

The allowed transition is:

```
Hamiltonian window receipt -> master receipt intake
```

The disallowed transition is:

```
composite center label -> proof without source window
```

Use in Paper 16

Paper 16 may read continuum edge residuals relative to Paper 9 windows, but it must keep the distinction between finite window emergence and continuum collapse visible.

Use in Later Papers

Later papers may use Paper 9 for:

- temporal window readout,
- composite center inputs,
- provenance-preserving receipt chains,
- Hamiltonian-style frame construction,
- accumulated center state.

Every use must state whether it imports finite window emergence or proves a new physical dynamics claim.

Precondition Rule

Before a later paper uses Paper 9, it should be able to answer:

What is the source center sequence?

What width is being used?

Which source indices are included?

What is the forward receipt?

What is the backward receipt?

Which receipt proves the emitted composite center?

Conclusion

Paper 9.75 turns Hamiltonian window emergence into portable state. It gives later papers composite centers with provenance, while keeping physical time claims tied to their own future proofs.
